```
The present sequence is human novel G protein coupled receptor

(NGPCR) protein. NGPCRs are transmembrane proteins that span the

cellular membrane and are involved in signal transduction after ligand

binding. NGPCR DNA sequences are useful as hybridisation probes for

screening libraries and assessing gene expression patterns. Sequences

derived from regions adjacent to the intron/exon boundaries of NGPCR

gene can be used to design primers for use in amplification assays to

detect mutations within the exons, splice sites, introns that can be

products are useful for identifying compounds that modulate gene

products are useful for identifying compounds that modulate gene

products are useful for identifying tompounds that modulate gene

treatment of mental, physiological or behavioural disorders and diseases.

NGPCR DNA sequences and antibodies are useful for diagnostic and

dentification of subjects having a predisposition to such disorders.

NGPCR DNA sequences are also useful for drug screening and in gene

thereby for medulating NGPCR expression and to produce genetically

characteristics are also useful for drug screening and in gene

thereby for medulating NGPCR expression and to produce genetically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             engineered host cells to express NGPCR products in vivo. The encoded NGPCR proteins are useful for generating antibodies, as reagents in diagnostic assays and for identifying other cellular gene products

The present sequence is human novel G protein coupled receptor

(NGPCR) protein. NGPCRs are transmembrane proteins that span the

cellular membrane and are involved in signal transduction after ligand
binding. NGPCR DNA sequences are useful as hybridisation probes for

creening libraries and assessing gene expression patterns. Sequences

derived from regions adjacent to the introny-exon boundaries of NGPCR

gene can be used to design primers for use in amplification assays to

detect mutations within the exons, splice sites, introns that can be

cused in diagnostics and pharmacogenomics. NGPCR sequences and/or gene

products are useful for identifying compounds that modulate gene

creptession or gene product activity. Such compounds are useful in the

transment of mental, physiological or behavioural disorders and diseases.

NGPCR DNA sequences and antibodies are useful for diagnostic and

prognostic evaluation of disorders related to NGPCR function and for the

condentification of subjects having a predisposition to such disorders.

NGPCR DNA sequences are also useful for drug screening and in gene

cherapy for modulating NGPCR expression and to produce genetically

binding. NGPCR DNA sequences are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NGPCR gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene products are useful for identifying compounds that modulate gene products are useful for identifying compounds that modulate gene expression or gene product activity. Such compounds are useful in the Exonostic evaluation of disorders related to NGPCR function and diseases. NGPCR DNA sequences and antibodies are useful for diagnostic and productication of subjects having a predisposition to such disorders. NGPCR DNA sequences are also useful for diagnostic and in gene therapy for modulating NGPCR expression and to produce genetically engineered host cells to express NGPCR products in vivo. The encoded NGPCR proteins are useful for generating antibodies, as reagents in consistent and products in NGPCR proteins are useful for generating antibodies, as reagents in a not account and products in NGPCR proteins are useful for generating antibodies, as reagents in the norder of the normal parts of the nor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240

treatment of mental, physiological or behavioural disorders and diseases. MORCR DNA sequences and antibodies are useful for disposite and prognostic evaluation of disorders related to NGPCR function and for the identification of subjects having a predisposition to such disorders. MORCR DNA sequences are also useful for drug screening and in gene therapy for modulating NGPCR expression and to produce genetically engineered host cells to express NGPCR products in vivo. The encoded diagnostic assays and for identifying other cellular gene products in elated to NGPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polynucleotides encoding human G protein coupled receptors useful for drug screening, diagnosis and in gene therapy of physiological or behavioral disorders -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is human novel G protein coupled receptor (NGPCR) protein. NGPCRs are transmembrane proteins that span the cellular membrane and are involved in signal transduction after ligand binding. NGPCR DNA sequences are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/cavo boundaries of NGPCR gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenemics. NGPCR sequences and/or gene products are useful for identifying compounds that modulate gene expression or gene product activity. Such compounds are useful in the
Human; novel G-protein coupled receptor; NGPCR; signal transduction; drug screening; transmembrane protein; mental disorder; gene therapy; nootropic; pharmacogenomics; behavioural disorder.
                                                                                                                                                                                                                                                                                                                                       Friedrich G, Zambrowicz B;

WPI; 2001-381634/40. N-PSDB; AAD08764

Screening instructions and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NGPCR gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene products are useful for identifying compounds that modulate gene reasons or gene product activity. Such compounds are useful in the treatment of mental, physiological or behavioural disorders and diseases. NGPCR DNA sequences and antibodies are useful for diagnostic and propostic evaluation of disorders related to NGPCR function and for the identification of subjects having a predisposition to such disorders. NGPCR DNA sequences are also useful for drug screening and in gene therapy for modulating NGPCR expression and to produce genetically engineered host cells to express NGPCR products in vivo. The encoded ligand The present sequence is human novel G protein coupled receptor (NGPCR) protein. NGPCRs are transmembrane proteins that span the cellular membrane and are involved in signal transduction after ligationing. NGPCR DNA sequences are useful as hybridisation probes for

The present sequence is human novel G protein coupled receptor

(NGPCR) protein. NGPCRs are transmembrane proteins that span the

cellular membrane and are involved in signal transduction after ligand

binding. NGPCR DNA sequences are useful as hybridisation probes for

screening libraries and assessing gene expression patterns. Sequences

derived from regions adjacent to the intron/exon boundaries of NGPCR

gene can be used to design primers for use in amplification assays to

detect mutations within the exons, splice sites, introns that can be

used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene

products are useful for identifying compounds that modulate gene

expression or gene product activity. Such compounds are useful in the

treatment of mental, physiological or behavioural disorders and diseases.

NGPCR DNA sequences and antibodies are useful for diagnostic and

prognostic evaluation of disorders related to NGPCR function and for the

identification of subjects having a predisposition to such disorders.

NGPCR DNA sequences are also useful for drug screening and in gene

therapy for modulating NGPCR expression and to produce genetically

engineered host cells to express NGPCR products in vivo. The encoded

NGPCR proteins are useful for generating antibodies, as reagents in

chargonical and product and products in vivo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         132

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is human novel G protein coupled receptor

(NGPCR) protein. NGPCRs are transmembrane proteins that span the
cellular membrane and are involved in signal transduction after ligand
binding. NGPCR DNA sequences are useful as hybridisation probes for
screening libraries and assessing gene expression patterns. Sequences
derived from regions adjacent to the intron/exon boundaries of NGPCR
gene can be used to design primers for use in amplification assays to
detect mutations within the exons, splice sites, introns that can be
used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene
products are useful for identifying compounds that modulate gene
expression or gene product activity. Such compounds are useful in the
treatment of mental, physiological or behavioural disorders and diseases.
NGPCR DNA sequences and antibodies are useful for diagnostic and
dentification of subjects having a predisposition to such disorders.
NGPCR DNA sequences are also useful for drug screening and in gene
therapy for modulating NGPCR expression and to produce genetically
engineered host cells to express NGPCR produce genetically
engineered host cells to express NGPCR products in vivo. The encoded
NGPCR proteins are useful for generating antibodies, as reagents in
classages and product for generating antibodies, as reagents in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ó

The present sequence is human novel G protein coupled receptor (NGPCR) protein. NGPCRs are transmembrane proteins that span the cellular membrane and are involved in signal transduction after ligand binding. NGPCR DNA sequences are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intronfexon boundaries of NGPCR gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be products are useful for identifying compounds that modulate gene products are useful for identifying compounds that modulate gene expression or gene product activity. Such compounds are useful in the transment of mental, physiological or behavioural disorders and diseases. NGPCR DNA sequences and antibodies are useful for identifying compounds that modulate gene expression or gene product activity. Such compounds are useful in the transment of mental, physiological or behavioural disorders and diseases. NGPCR DNA sequences and antibodies are useful for diagnostic and prognostic evaluation of disorders related to NGPCR function and for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel polynucleotides encoding human G protein coupled receptors useful for drug screening, diagnosis and in gene therapy of physiological or behavioral disorders -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; novel G-protein coupled receptor; NGPCR; signal transduction; drug screening; transmembrane protein; mental disorder; gene therapy; nootropic; pharmacogenomics; behavioural disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            identification of subjects having a predisposition to such disorders. NGPCR DNA sequences are also useful for drug screening and in gene therapy for modulating NGPCR expression and to produce genetically
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  engineered host cells to express NGPCR products in vivo. The encoded NGPCR proteins are useful for generating antibodies, as reagents in diagnostic assays and for identifying other cellular gene products related to NGPCR.

binding. NGPCR DNA sequences are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NGPCR gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene products are useful for identifying compounds that modulate gene expression or gene product activity. Such compounds are useful in the treatment of mertal, physiological or behavioural disorders and diseases. NGPCR DNA sequences and antibodies are useful for diagnostic and prognostic evaluation of disorders related to NGPCR function and for the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       GAVFHYFLLCAFTWMGLEAFHLYLLAVRVFNTYFGHYFLKLSLVGWGLPALMVIGTGSAN 401

                                                                                                                                                                                                                                                                                                                                                                                       Identification of subjects having a predisposition to such disorders. NGPCR DNA sequences are also useful for drug screening and in gene therapy for modulating NGPCR expression and to produce genetically engineered host cells to express NGPCR products in vivo. The encoded NGPCR proteins are useful for generating antibodies, as reagents in elagnostic assays and for identifying other cellular gene products in related to NGPCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          162 LFKGPRLGLGDGSGVLNNRLVGLSVGQMHVTKLAEPLEIVFSHQRPPNMTLTCVFWDVT 221

screening libraries and assessing gene expression patterns. Sequences derived from regions adjacent to the intron/exon boundaries of NGPCR gene can be used to design primers for use in amplification assays to detect mutations within the exons, splice sites, introns that can be used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene products are useful for identifying compounds that modulate gene expression or gene product activity. Such compounds are useful in the treatment of mental, physiological or behavioural disorders and diseases. NGPCR DNA sequences and antibodies are useful for diagnostic and prognostic evaluation of disorders related to NGPCR function and for the
                                                                                                                                                                                                                      Novel polynucleotides encoding human G protein coupled receptors useful for drug screening, diagnosis and in gene therapy of physiological or behavioral disorders -
                                                                                                                                                                                                                                                                                                                                                                                              (NGPCR) protein. NGPCRs are transmembrane proteins that span the cellular membrane and are involved in signal transduction after ligand binding. NGPCR DNA sequences are useful as hybridisation probes for

The present sequence is human novel G protein coupled receptor

(NGPCR) protein. NGPCRs are transmembrane proteins that span the
cellular membrane and are involved in signal transduction after ligand
binding. NGPCR DNA sequences are useful as hybridisation probes for
screening libraries and assessing gene expression patterns. Sequences
derived from regions adjacent to the intron/exon boundaries of NGPCR
gene can be used to design primers for use in amplification assays to
detect mutations within the exons, splice sites, introns that can be
used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene
products are useful for identifying compounds that modulate gene
expression or gene product activity. Such compounds are useful in the
treatment of mental, physiological or behavioural disorders and diseases.
NGPCR DNA sequences and antibodies are useful for diagnostic and
prognostic evaluation of disorders related to NGPCR function and for the
identification of subjects having a predisposition to such disorders.
NGPCR DNA sequences are also useful for drug screening and in gene
therapy for modulating NGPCR expression and to produce genetically
engineered host cells to express NGPCR products in vivo. The encoded
NGPCR proteins are useful for generating antibodies, as reagents in
diagnostic assays and for identifying other cellular gene products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polynuclectides encoding human G protein coupled receptors useful for drug screening, diagnosis and in gene therapy of physiological or

The present sequence is human novel g protein coupled receptor (NGPCR) protein. NGPCRs are transmembrane proteins that span the cellular membrane and are involved in signal transduction after ligand binding. NGPCR DNA sequences are useful as hybridisation probes for screening libraries and assessing gene expression patterns. Sequences of screening libraries and assessing gene expression patterns. Sequences of NGPCR can regions adjacent to the intron/exon boundaries of NGPCR gene can be used to design primers for use in amplification assays to detect mutations within the exoris, splice sites, introns that can be used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene products are useful for identifying compounds that modulate gene expression or gene product activity. Such compounds are useful in the treatment of mental, physiological or behavioural disorders and diseases. NGPCR DNA sequences and antibodies are useful for adapostic or identification of subjects having a predisposition to such disorders. NGPCR DNA sequences are also useful for drug screening and in gene therapy for modulating NGPCR expression and to produce genetically engineered host calls to express NGPCR products in vivo. The encoded NGPCR proteins are useful for generating antibodies, as reagents in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polynucleotides encoding human G protein coupled receptors useful for drug screening, diagnosis and in gene therapy of physiological or behavioral disorders -

```

```
The present sequence is human novel G protein coupled receptor

(NGPCR) protein. NGPCRs are transmembrane proteins that span the
cellular membrane and are involved in signal transduction after ligand
binding. NGPCR DNA sequences are useful as hybridisation probes for
screening libraries and assessing gene expression patterns. Sequences
derived from regions adjacent to the intron/scon boundaries of NGPCR
gene can be used to design primers for use in amplification assays to
detect mutations within the exons, splice sites, introns that can be
used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene
products are useful for identifying compounds that modulate gene
expression or gene product activity. Such compounds are useful in the
treatment of mental, physiological or behavioural disorders and diseases.
NGPCR DNA sequences and antibodies are useful for diagnostic and
prognostic evaluation of disorders related to NGPCR function and for the
identification of subjects having a predisposition to such disorders.
NGPCR DNA sequences are also useful for drug screening and in gene
therapy for modulating NGPCR expression and to produce genetically
engineered host cells to express NGPCR products in vivo. The encoded
therapy can be useful for generating antibodies, as reagents in
diagnostic assays and for identifying other cellular gene products

Novel polynucleotides encoding human G protein coupled receptors useful for drug screening, diagnosis and in gene therapy of physiological or behavioral disorders -

Disclosure; Page 69-70; 91pp; English.

The present sequence is human novel G protein coupled receptor

(NGPCR) protein. NGPCRs are transmembrane proteins that span the
cellular membrane and are involved in signal transduction after ligand
binding. NGPCR DNA sequences are useful as hybridisation probes for
screening libraries and assessing gene expression patterns. Sequences
derived from regions adjacent to the intron/exon boundaries of NGPCR
gene can be used to design primers for use in amplification assays to
detect mutations within the exons, splice sites, introns that can be
used in diagnostics and pharmacogenomics. NGPCR sequences and/or gene
products are useful for identifying compounds that modulate gene
products are useful for identifying compounds that modulate gene
creatment of mental, physiological or behavioural disorders and diseases.
NGPCR DNA sequences and antibodies are useful for diagnostic and
interval and interval and interval are useful for diagnostic and
interval and interval and interval are useful for diagnostic and
interval and inte identification of subjects having a predisposition to such disorders. NGPCR DNA sequences are also useful for drug screening and in gene therapy for modulating NGPCR expression and to produce genetically engineered host cells to express NGPCR products in vivo. The encoded NGPCR proteins are useful for generating antibodies, as reagents in diagnostic assays and for identifying other cellular gene products in related to NGPCR. NAME OF THE PROPERTY OF THE PR

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 2, Ap
